

bitnotes.com/papercraft

1. Cut around two main pieces. One will form the top and one will form the bottom.
2. Fold along all interior lines and the shaded tabs. Triangles with vertical lines fold outward to form the wings.
3. Examine folds first, then put glue on inside of wings and fold together. When you're done, triangles should form curve upward of square.
4. Finally, glue three tabs around square and fold and attach against triangles to form a pyramid with wings.
5. Complete second piece as above and then glue squares together.
